WORK EXPERIENCE

Web Developer
Atomic Infotech - Bellevue, WA - June 2013 to Present

• Full stack development of the company's core product, a social intranet for small/medium sized retailers, which includes a variety of reports and tools.
• Develop and maintain websites for various clients. (mudbay.com, pawn1.com, bakstadconstruction.com)

Major Projects:
- conversion of the server side code from PHP to node.js modules.
- conversion of front end code to use Handlebars.js templates and Bootstrap instead of Mustache.
- a CouchDB based forms system that allows user to create dynamic forms, from various HR applications to store audits.
- a fully custimizable workflow system that helps the client to manage and handle their tasks, which includes HR requests, special order process, inventory adjustment requests, and many more. It works both standalone and as an extension of the forms tool.
- a till count app that uses backbone.js. It provides a calculator to help store users to close out their cashdrawers at end of the day, and allows the manager to review the results.
- a light CMS for mudbay.com that is integrated in the social intranet, it allows the client to change their stores and employment information along with various listings and uploading store images.
- a gallery tool that's used for uploading and managing images so they can be used in blog posts and product pages.
